

Introduction

SHARP Trends Report™

**The Quarterly Report Cuts Through the Noise to
Provide Clear Insights into Your Patient
Population and Health Outcome Improvements**

Overview

The SHARP Trends Report: A Window into the Future of Healthcare

The SHARP Trends Report™ (or “SHARP Report”) is a **quarterly publication** that provides health data analytics showing outcomes improvements from Remote Patient Monitoring (RPM) for a dedicated patient population. The report is a valuable resource for healthcare providers, insurance plans, and policymakers, as it provides insights into the impact of RPM on patient health and care delivery.

RPM allows patients to remotely monitor their health data using wearable devices and mobile apps. This data is then sent to the patient's doctor, who can provide care and support remotely. RPM can be a lifesaver for patients across the nation. Through cellular-enabled technology, patients can now monitor health data at home, and can easily communicate with providers or have the dedicated JoinCareTeam™ clinical staff provide triage care coordination to providers automatically based on critical alerts and assessments. Learn more about JoinCareTeam at www.JoinCareTeam.com.

The SHARP Report is valuable for any organization managing a patient population with RPM being administered. **Schedule a demo today, email GetRPM@Certintell.com**

Here are some of the key findings from the SHARP Report:

- ▶ RPM helps to improve patient outcomes over time.
- ▶ RPM is effective for a variety of chronic conditions, including heart failure, diabetes, hypertension, and COPD.
- ▶ RPM is well-received by patients, who appreciate the convenience and flexibility of remote monitoring.
- ▶ RPM is a rapidly growing field, and there is a lot of potential for innovation in this area.

The SHARP Report is a must-have for those needing health insights for their population

The report provides valuable insights into the impact of RPM on patient health and care delivery. As a healthcare provider, patient, or policymaker, by working with JoinCareTeam powered by Certintell Telehealth, you have direct access the SHARP Report.

Background: Sharp you say?

The SHARP Trends Report™ (SHARP Report) is sharp because it cuts through the noise and provides clear insights into the impact of Remote Patient Monitoring (RPM) on patient health and care delivery. **The report is based on data from thousands of patients and is clinically reviewed.** This makes the report a reliable and credible source of information.

The SHARP Report is also sharp because it is timely and relevant. It is published quarterly, so it always reflects the latest trends of a specific patient population in RPM. This makes the report a valuable resource for healthcare providers, insurance plans, and policymakers who are looking for information on how to improve patient outcomes and reduce healthcare costs.

Finally, the SHARP Report is sharp because it is **visually appealing and easy to read.** The report uses data visualization techniques to make the data easy to understand and interpret. This makes the report a valuable tool for communicating the impact of RPM to a wide audience.

The SHARP Report: Cutting Through the Noise to Provide Clear Insights

Sneak Peek at Future SHARP data reports...

- SHARP Benchmark Report
 - Standardized Adult Health Care Quality Measures & More
- SHARP Plus Report
 - Geographical data overlay showing how SDOH impacts your patient population
 - Compare your community health organization with others in the region!
